The Efficient Outcome Set of
a Bicriteria Linear Programming Problem and Application

N. T. B. Kim[1], N. T. M. Hue[2], and <u>D. P. Vu</u>[3]

Abstract: We study the efficient outcome set Y_E of a a bicriteria linear programming problem (BP) and present a simple algorithm for generating all extreme points of Y_E. Application of the algorithm to the problem of minimizing a convex function over the efficient set of (BP) is considered.
